TOOL TALK

Jon Eakes on framing nailers, page 22

And how about that framing hammer itself? If you really want to treat yourself to a wonderful new experience, try a 14-ounce titanium framing hammer. That's right: 14 ounces. Depending on the company, they claim the same performance as a 21- or 24-ounce hammer. They have much longer handles for more momentum on the swing with that lightweight but solid titanium head. Surprise, surprise — they actually do the job better with less wear on your hand and arm.
